Frontend developer

I am working with the following projects: admin panel for marketing needs. Forms, embedded in partner sites.

My duties:

1. Creating new components from scratch using MaterialUI widgets and full custom widgets. Creating new functionality for administrative panel such as marketing companies traffic scheduling and statistics.

2. Project support: fixing bugs, refactoring old components, react rendering optimization.

Project tech stack: React, Redux, React-Router, Redux-Saga.
Project build system: webpack.
Work organization: git, git-flow, gitlab, jira.

March 2021 — till October 2022 1 year 10months	**StreamLabs** www.streamlabs.ru/ IT, System Integration, Internet • Software Development ## Frontend developer I am working on the following projects:controlpanel for analysis of TV and radio broadcasts. My duties: 1. Creating new react components from scratch. Creating new pages such as reporting page. 2. Project support: fixing bugs, refactoring old components, rewriting them from react classes to hooks, translating the project to typescript, documentation, performance optimization and react rendering optimization. Project tech stack: React, Redux, React-Router, Redux-Saga. Project build system: webpack. Work organization: git, git-flow, gitlab, jira.
January 2020 — March 2021 1 year 3 months	**5Visions** IT, System Integration, Internet • Software Development ## JavaScript developer Startup project, the main idea of which -create a new social network. My duties: 1. UI development for a mobile application under WebView (Safari on IOS and Chrome on Android) using modern JavaScript ES6+. The project is built on the classic MVC architecture, without the use of any frontend frameworks. 1a. Creating a web version of this app on react / redux stack. 2. Creating custom animations with javascript (eg: scrolling with inertia, carousel) and CSS transitions. 3. Organization of data caching using IndexedDB, doing some work with ServiceWorker. 4. Profiling browser operations, monitoring the critical rendering path, monitoring resource loading, etc. Project tech stack: React, Redux, Components on javascript classes, IndexedDB, ServiceWorker Project build system: webpack. Work organization: git, git-flow, gitlab, jira.

January 2018—January 2020 2years1 month	**Callbackhunter**
	callbackhunter.com
	## Frontend developer
	The company supported the callback widget (https://callbackhunter.com) and created courses for beginner marketers (https://marketingstart.ru).
	My duties:
	1. Creating of responsive landing pages and responsive emails.
	2. Working with user's personal account on react. I used StyledComponents to style widgets, and Redux to manage the state on the client.
	Project tech stack: React, Redux, Axios, StyledComponents, React class-components
	Project build system: webpack.
	Work organization: git, git-flow, gitlab, jira.
